                                                                                                         of the chimeric protein acres as an intramplecular chaperone (IMC) for the insulin precursor, enabling it to fold correctly. The cleavable peptide linker has a C-terminal Arq residue which enables the high protein to frecombinate human insulin with enables the high portion of the chimeric protein can provide human insulin with correctly linked cysteine bridges with fewer necessary procedural steps, and hence resulting in a higher yield of human insulin. The IMC sequences not only protect insulin sequences from intracellular degradation by a microorganism host, but also promote the folding of the fused insulin precursor, facilitate the solutions protein among the fusion proteins of the sequences the intranolecular interactions among the fusion proteins, thus allowing folding of the fusion proteins and cerease the internolecular procedural steps of cyanogen bromide cleavage, oxidative sulphitolysis and related purification steps can thus be eliminated, along with the use of high concentrations of mercaptan or the use of hydrophobic absorbent

This Sequence Tepresents a Collimetric process.

This Sequence (ARM) of the sequence given in AAV42855, a cleavable peptide hormone (AGM) of the sequence given in AAV42855, a cleavable peptide in the content of the chimetric protein across compressing insulin.

A and B chains (AAV42895), and a human insulin precursor compension in state of the content of the chimetric protein acts as an intramolecular chapterone (IMC) for the insulin precursor.

C enabling it to fold correctly. The cleavable peptide linker has a clearant of the correctly. The cleavable peptide linker has a clearant of the content of the correctly in the insulin protein can provide human insulin via an AGM profitsulin of the compinant human insulin via an AGM profitsulin a higher yield of recombinant human insulin via an AGM profitsulin sequences from intracellular degradation by a microorganism host, but also promote the folicing of the fused insulin precursor, facilitate the solubility of the fusion proteins, thus all wing folding of the fused insulin precursor at commercially useful high concentrations. The procedural steps of cyanically useful high concentrations in the fuse of high concentrations steps can thus be eliminated, along with the use of high purification steps can thus be eliminated, along with the use of high concentrations of mercaptan or the use of hydrophobic absorbent resins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 TPSNREETQQKSNLEHRISHLLIQSWLEPVQLGTGPRFVNQHLCGSHLVEALYLVCGER 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ID
                                                                                                                                                                         This sequence represents an archimente protein (AAV42861) which also contains a human insulin precursor (AAV42859). The hGH portion of the chimeric protein acts as an intramolecular chaperone (IMC) for the insulin precursor, enabling it to fold correctly. A cleavable peptide insulin precursor, enabling it to fold correctly. A cleavable peptide linker with a C-terminal Arg residue (AAV42857) enables the hGH portion of the chimeric protein to be removed after folding has taken place. Production of recombinant human insulin with correctly linked cysteine bridges with fewer necessary procedural steps, and hence resulting in a higher yield of human insulin with correctly linked cysteine bridges yield of human insulin. The IMC sequences not only protect insulin sequences from intracellular degradation by a microorganism host, but also promote the folding of the fuscon protein and decrease the intermolecular interactions among the fusion proteins, thus allowing folding of the fusion protein and decrease the intermolecular interactions among the fusion proteins, thus allowing folding of the fusion protein and decrease the intermolecular corrections and related purification steps can thus be eliminated, along with the consentrations of mercaptan or the use of hydrophobic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; anti-anglogenic; prolactin; placental lactogen; hPL; anglogenesis; growth hormone; hGH; hGH-V; capillary endothelial cell proliferation; placental vascularisation; pregnancy; treatment; anglogenic disease;

requirings can be used to provide the arthritic such as the control arthritis, atherosclerotic plaques, corneal graft neovascularisation, delayed wound healing, proliferative retinopathy who as diabetic retinopathy, macular degeneration, granulations such as those occurring in haemophilic joints, inappropriate vascularisation in wound healing such as hypertrophic scars or keloid scars, neovascular glaucoma, ocular tumour, uveitis, non-union fractures, Osler-Weber syndrome, psoriasis, pyogenic glaucoma, retrolental fibroplasia, scleroderma, solid tumours, kaposi's sarcoma, trachoma, vascular adhesions, chronic varicose ulcers, leukaemia, and reproductive disorders such as follicular and ulveal cysts and choriocarcinoma. They can also be used as contraceptive agents. DNA encoding the poptides can be used in gene therapy. The measurement of abnormal levels of Nuterminal Iraqments of hell, hGH+, prolacitin or hPL can be used in assays for impairment of vascular development associated with pre-eclampsia, intrauterine growth retardation, and placental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes novel human anti-angiogenic peptides derived from 10 to 150 consecutive amine acids selected from the N-terminal end of human placental lategore. Purl, human growth hormone (htm), growth hormone bariant (htm), or he an productin. Such peptides (ii) inhibit capillary endothelial cell preliferation and organisation (ii) inhibit angiogenesis in chick choricallantoic membrane and (iii) binds to at least one specific receptor which does not bind an intact full length hGH, hPL, prolactin or hGH-V. The invention also describes a method for diagnosing a probable abnormality of placental vascularisation during pregnancy. The peptides can e used for treating an angiogenic disease in modulating vascularisation of patient's placenta. In particular, the peptides can be used for preventing or treating e.g. malignant tumours,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of known amino acid sequence in a parent polypeptide e.g. human growth hormone (hGH) which has been cloned and has a pre-identified biological activity, where the active domain interacts with a target when the parent polypeptide is in its native-folded form and the interaction is responsible for the biological activity comprising: (a) comparing the amino acid sequence of polypeptide structure in the region of known amino acid sequence or polypeptide structure in the region of known amino acid sequence of an analogue polypeptide (e.g. prolactin, placental lactogen or porcine growth hormone) which has at least 15% homology with hGH alpha-carbon coordinates within about 2-3.5 angstroms of hGH alpha-carbon coordinates for about 60% of the analogue sequence, where any interaction of the analogue with the target is different from target interaction with hGH;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (b) substituting DNA encoding an analogous polypoptide segment from the analogue into DNA encoding the full length hGH, and expressing a manalogue into DNA encoding the full length hGH, and expressing a polypoptide (c) contacting the segment-substituted polypoptide (c) contacting the segment assequent of the pand (c) with a second analogous polypoptide segment; and segment-substituted polypoptides as an indication of the location of the unknown active domain in hGH. The method is useful for determining the relationship between structure and function of known polypoptide segmences. The present sequence is that of human growth hormone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to identifying an unknown active domain in a region
                                                                                                                                                                                                                                                                                                                                                                                                         acid sequence by substituting analog segments into the parent polypeptide is useful to determine the relationship between structure and function
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mutant substituted with residues from an hGH analogue (prolactin, placental lactogen or porcine growth hormone).

Note: The present sequence is not shown in the specification but was created by the indexer using the mature hGH sequence and information contained in the specification.
                                                                                                                                                                                                                                                                                                                                                                                   Identifying active domains within cloned polypeptides of known amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 191;

protein - consisting of human i to foreign protein, for stability

87JP-0304937 87JP-0304937

61 TPSNREETQQKSNLELLRISLLLIQSWLEPVQLGTGPRFVNQHLCGS------HLV 110 61 TPSNREETQQKSNLELI SLLLIQSWLEPVQF-LRSVFANSLVYGASDSNVYDLLKDLE 119 The invention consists of a vector contg. a fusion protein which is formed by ligating, downstream of a promoter. hGH or a deriv. (pref. formed by subtstn. of Met-14 with Leu) and a foreign protein. Stability of the vector in the host is greatly increased so the protein yield is higher. This invention describes novel human anti-anglogenic peptides derived from 10 to 150 consecutive amino acids selected from the N-terminal end of from 10 to 150 consecutive amino acids selected from the N-terminal end of human placental lactogen (hPL), human growth hormone (hGH) growth hormone variant (hGH-V), or human prolactin. Such peptides (i) inhibit capillary endothelial cell proliferation and organisation (ii) inhibit capillary endothelial cell proliferation and organisation (ii) inhibit consists of a probable abnormality of placental vacularisation during pregnancy. The peptides can be used for treating an angiogenic disase in a subject, for inhibiting tumour formation or growth in a patient or for modulating vacularisation of a patient's placenta. In particular, the peptides can be used for preventing or treating e.g. malignant tumours, contacting a subject, for inhibiting tumour formation arthritic such as rheumatoid a subject, for inhibiting tumour formation arthritic such as rheumatoid carthritis, atherosclerotic plaques, conneal graft necessorial and a contaction, celayed wound healing, proliferative retinopathy such as diabetic contactional placental placental placental placental glaucoma, sociar memophilic joints inappropriate vascularisation in wound healing, contactorial such as hypertrophic scars or keloid scars, necessariant, sold tumours, coular tumour, uveitis, non-union fractures, Osler-Weber syndrome, psoriasis, placender and choiccarchoma. Tetrolental fibroplasis, scheroderma, solid tumours, conditions the peptides can also be used as contraceptive agents. DNA encoding the peptides can be used in gene therapy. The measurement of abnormal levels of N-terminal fragments of hGH, hGH-V, prolactin or hPL very business intracellangs and placental and placental account of vascular daveloner, and placental account of vascular daveloner, and placental angelian proverse impairment of vascular daveloner, and placental angeliance of managements and reproductive discounts of vascular daveloner, and pl

Beta-NGF can be used to control geriatric dementia and other nervous disorders, and can be released from the fusion protein by incubation with thrombin (see AAN90577-8, AAP91034, AAP91299).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New human nervo growth factor gene encoding fusion protein - having cleavage site for thrombin, useful for treating generation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human growth hormone segment, used at the N-terminal of a fusion

                                                                                                                                                                                                                                                                                                                                                                       Fusion protein consisting of human growth hormone at the tremnial end (1st region), a 3 amino acid sequence representing thrombin recognition site, and human beta nerve growth factor (4eta-WEY) at the C-terminal. Beta-NGF can be used to control geriatric generating and other nervous disorders, and can be released from the fusion protein by incubation with thrombin (see AAN90577-8, AAP91034.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MFPTIPLSRLFDNAMLRAHRIHQIAFDTYQEFEEAYIPKEQKYSFLUNPQTSLSFSESIP 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A recombinant human nerve growth factor beta subunit-conty. protein can be produced as this fusion protein. It is purified by contacting a qel having a cation exchange qp. with the fusion protein, in the presence of urea. The purified protein is useful in a medicament for treating disorders of the nervous system, eg dementia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                88JP-0162556                                                     The invention relates to new conjugates, which exhibit growth hormone (GH) activity and comprise at least one non-polypeptide group covalently attached to a GH polypeptide. The amino acid sequence of the conjugates differs from that of wild type human GH in at least one introduced and at least one removed amino acid residue comprising an attactment group for the first non-polypeptide group. The conjugate or pharmaccutical composition is useful for treating a disease or for manufacturing a medicament for treating a disease, e.g. Turner's syndrome. GH deliciency in adults (i.e. GHDA), achondroplasia, chronic renal insufficiency or failure (including renal failure in children), acquired immune deliciency syndrome (ALDS) wasting, cachexia in AIDS patients, or cachexia associated with other diseases. The conjugates are useful if the treating a variety of disorders caused by growth hormone inadequacy. The present

```
of known amino acid sequence in a parent polypeptide e.g. human growth bromone (hds) which has been cloned and has a pre-identified biological activity, where the active domain interacts with a target when the polypeptide is in its native-cloded form and the interaction is responsible for the biological activity coorprising; (a) comparing the amino acid sequence of polypeptide structure in the region of known amino acid sequence of hdH with the amino acid sequence or polypeptide structure in a region of known amino acid sequence of an analogue polypeptide (e.g. prolactin, placental lactogen or portine growth hormone) which has at least 15% homology with hdH alpha-carbon coordinates within about 2.3.5 angstroms of hdH alpha-carbon coordinates for about 60% of the analogue sequence, where any interaction of the analogue with the target is different from target interaction with hdH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (b) substituting DNA encoding an analogous polypeptide segment from the manalogue into DNA encoding the full length hGH, and expressing a segment substituted polypeptide; (c) contacting the segment-substituted polypeptide (c) contacting the segment-substituted polypeptide with the target to determine interaction; (d) repeating steps
                                                                                                                                                                                                                                                                    the invention relates to identifying an unknown active domain in a region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (b) and (c) with a second analogous polypeptide segment, and (e) comparing the difference between activity of the first and second segment-substituted polypeptides as an indication of the location of the unknown active domain in helf. The method is us ful for determining the relationship between structure and function of known polypeptide sequences. The present sequence is that of human growth hormone
                                                     Identifying active domains within cloned polypeptifes of known amino acid sequence by substituting analog segments into the parent polypeptide is useful to determine the relationship between structure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mutant substituted with residues from an hGH analogue (prolactin, placental lactogen or porcine growth hormone).

Note: The present sequence is not shown in the specification but was created by the indexer using the mature hGH sequence and information contained in the specification.
                                                                                                                                                                                                        Example 1; Page -; 86pp; English

Growth hormone; placental lactogen; prolactin; active domain; hGH; structure-function relationship; segment-substituted polypeptide; mutant; mutein. ABG94977 standard; Protein; 191 AA Human growth hormone mutant Y103A. (first entry) 03-DEC-2002 ABG94977; RESULT 14 ABG94977

Homo sapiens.

```
The invention relates to identifying an unknown active domain in a region of known amino acid sequence in a parent polypeptide e.g. human growth hormone (hGH) which has been cloned and has a pre-identified biological activity, where the active domain interacts with a target when the polypeptide is in its native-folded form and the interaction is responsible for the biological activity comprising: (a) comparing the amino acid sequence or polypeptide structure in the region of known amino acid sequence of hGH with the amino acid sequence or polypeptide structure in a region of known amino acid sequence of an analogue polypeptide (e.g. prolact: placental lactogen or porcine growth hormone) which has at leas 18% homology with hGH alpha-carbon coordinates within about 2 % angstroms of hGH alpha-carbon coordinates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polypeptide with the target to determine interaction; (d) repeating steps (b) and (c) with a second and rous polypeptide segment; and (e) comparing the difference between activity of the first and second
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  62 PSNREETQQKSNLELLRISLLLIQSWLEPVQLGTGPRFVNQHLCGS------HLVE 111

-!- FUNCTION: Plays an important role in growth control. Its major role in stimulating body growth is to stimulate the liver and other tissues to secrete IGF1. It stimulates both the differentiation and proliferation of myoblasts. It also stimulates amino acid uptake and protein synthesis in muscle and other

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                "Growth hormone heterogeneity in human pituitary and plasma.";
Horm. Res. 51 Suppl. 1.2-6(1999).
-i- FUNCTION: Plays an important role in growth control. Its major
role in stimulating body growth is to stimulate the liver and
other tissues to secrete IGF-1. It stimulates both the
differentiation and proliferation of myoblasts. It also stimulates
amino acid uptake and protein synthesis in muscle and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -:- SUBUNIT: Monomer, dimer, trimer, tetramer and pentamer, disulfide-
linked or non-covalently associated, in homopolymeric and
heteropolymeric combinations. Can also form a complex either with
GHBP or with the alpha2-macroglobulin complex.

"Sequence and expression of hamster prolactin and growth hormone
massenger RNAs."
Endocrinology 129:2965-2971(1991).

-I- FUNCTION: Plays an important role in growth control. Its major
role in stimulating body growth is to stimulate the liver and
other tissues to secrete IGF-I. It stimulates both the
differentiation and proliferation of myoblasts. It also stimulate
amino acid uptake and protein synthesis in muscle and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

J. 109:19-24(1968).
-!- FUNCTION: Plays an important role in growth control. Its major role in stimulating body growth is to stimulate the liver and other tissues to secrete IGF-1. It stimulates both the differentiation and proliferation of myoblasts. It also stimulates amino a:id uptake and protein synthesis in muscie and other
